PROFILE

AI & Data Science undergraduate (2023–2027) with hands-on experience in Python, machine learning, SQL, and Generative AI fundamentals, skilled in data preprocessing, feature engineering, model training, prompt engineering, and developing end-to-end AI applications using real-world datasets.

EDUCATION

ST. Martins Engineering College, Hyderabad — **B.Tech in Artificial Intelligence & Data Science** (2023–2027)

Narayana Junior College, Hyderabad — **Intermediate in MPC** (2021–2023)

Newton Techno High School, Hyderabad — **SSC, Board of Secondary Education** (2021)

SKILLS

Technical: Python, SQL, Machine Learning, PyTorch (Fundamentals), Statistical Data Analysis, Data Visualization,Data Structures & Algorithms, Data Preprocessing, Feature Engineering, Model Training, Model Evaluation.

Soft Skills: Effective Cross-Functional Communication, Creative Problem Solving, Time Management, Adaptability, Continuous Learning, Analytical Thinking.

Tools: Power BI, Pandas, PyTorch, NumPy, Scikit-learn, Streamlit, PostgreSQL, Matplotlib, Git , MS Excel.

Experience

Data Science Intern | Evoastra | June 2025 – August 2025

- Developed machine learning solutions using Python for business analytics and customer insight projects.
- Built ETL workflows involving data cleaning, preprocessing, feature engineering, and SQL-based analysis.
- Performed sentiment analysis and developed Power BI dashboards to generate actionable business insights.
- Collaborated with cross-functional teams to document experiments and support data-driven decision-making.

PROJECTS

PPE Detection using Deep Learning

- Developed a YOLOv8-based object detection system trained on 2,800+ construction-site images to detect 10 classes, including hardhats, masks, safety vests, personnel, vehicles, and machinery.
- Trained and evaluated a custom YOLOv8 Nano model using validation metrics, confusion matrix, and precision-recall analysis for automated PPE compliance monitoring.
- Tech: Python, YOLOv8, Deep Learning, Computer Vision, Neural Networks, Kaggle.

Movie Recommendation System

- Developed a content-based recommendation engine for 10,000+ movies, leveraging 20+ metadata attributes to achieve 80%+ similarity accuracy using cosine similarity and Scikit-learn.
- Demonstrated adaptability by iterating on user feedback to enhance recommendation accuracy.
- Tech: Python, Pandas, Scikit-learn, Streamlit. [Live Demo]

Loan Approval Prediction

- Built a machine learning model to predict loan approval status using applicant demographic and financial data.
- Applied data preprocessing and classification techniques to improve approval prediction accuracy.
- Tech: Python, Pandas, NumPy, Scikit-learn, Matplotlib.
